

**BROILER**  
**Nutrition**  
**Specification**

June 2007

**ROSS**

## Introduction

Nutrition specifications for broilers are given in the following tables for a range of production and market situations across the world:

As-Hatched < 1.9kg	(4.2lb) liveweight	Table 1
As-Hatched 2.0-2.5kg	(4.4-5.5lb) liveweight	Table 2
As-Hatched > 3.0kg	(6.6lb) liveweight	Table 3

Modifications may need to be made for specific market conditions. Factors to be considered are:

- Final product - live bird or portioned products
- The supply and price of feed ingredients
- Age and liveweight at slaughter
- Yield and carcass quality
- Market requirements for skin colour, shelf-life etc.
- Use of sexed growing

The most appropriate diet will be designed to either minimise cost for live bird production or maximise margin over cost for portioned products required by the processing plant. For optimal portions margin, it is recommended that amino acid density be increased up to 5% in all diets.

Further information on producing feeds which will satisfy the nutrient requirements of broiler stock is contained in the Ross Nutrition Supplement.

The local Nutrition Service Manager or Technical Service Manager should be consulted for more specialised situations and for advice on local markets.

### NOTES

These feed specifications should be used as a guide. They require adjustment for local conditions and markets. A withdrawal feed should be fed to meet local requirements for drug withdrawal times. This can be formulated to the same standards as the finisher or to a slightly lower specification.
